Carbon Tech

These carbon fiber rotary valves won't destroy your motor if something goes through the intake like stock steel ones will!

Try a different opening (like 3-4) for more power. modified engines need a bigger valve to let them breath! (smaller opening - more bottom end) (larger opening -more mid range and top end)

Impellers

SOLAS

SOLAS, the technology leader in the impeller design, creates lots of outstanding advantages built into its products. All SOLAS impellers are made of an ultra high strength, corrosion resistant stainless steel, and are cast in a one-piece mold without bending the edges of the blades to achieve the perfect pitch.

Dynafly Impeller

Solas' newest technology. New for 2000, this impeller is currently available for the Kawasaki Ultra 150 and the Sea-Doo 155mm pumps (951 cc craft).

Concord Impeller

In 1998, Solas introduced the new Concord series of impellers featuring a new radial leading edge design, with Solas' innovative blade technology. The Concord design produces explosive bottom end acceleration, great rough-water hook up, and more top speed in most applications compared with other similar designs. The Concord design is very popular in closed-course racing, for anyone that rides in rougher conditions, and with skis that cavitate upon initial acceleration.

X-Series Impeller

This model includes the X, XO, XI, XII series. It is designed with the "Best of Both Worlds" frame of mind. In most applications it is suggested you will gain low end acceleration, a powerful midrange, and an impressive top end speed. The X-Prop is very popular in competition and with recreational riders alike. The blades are placed around a pear shaped hub which directs the water efficiently and therefore faster. A more aggressive impeller design, the blades are straight cut which provides a better brake through the water.

Super Camber S-I-J-K-H

The Super Camber S-I-J-K-H series is a more streamlined design than the A-B-C series, in reference to the hub and rubber seal. This design is very effective at reducing cavitation in more of the mid-level craft available. In most applications it is suggested for, this style impeller provides excellent top speed while retaining plenty of acceleration performance.

Super Camber A-B-C-D-E

The Super Camber A-B-C-D-E series is Solas' original design Impeller mainly used on entry-level watercraft. The Super Camber Blade design, with a progressive pitch from the leading edge to the trailing edge, catches the fluid characteristics and increases the thrust of the impeller. This is a great all-around performance impeller for the suggested applications.

Intake Grates – Hook up at all time

The definition of SOLAS performance is not simply speed. Instead, its speed, handling, dependability, durability, smooth operation, and lots more. SOLAS intake grate is made of cast aluminum. Each is finished with an epoxy powder coating which makes SOLAS intake grates highly corrosion and abrasion resistant. The airfoil section allows more water flow consistently into the pump to eliminate cavitation and improves hook up capability. SOLAS offers several models for the PWC Market.
