TURNING POINT PROPELLERS - EXPRESS

Express Manufacturing, Design & Performance Features

Proprietary Stainless Steel, TP17™

Formulated to meet the exacting requirements of the New Express Mach3 and Mach4 designs. 20% higher chromium content than the competition - more shine, better corrosion resistance. Almost 250% Stronger and 5X more durable than run-of-the-mill stainless steel. This new material allows Turning Point's Engineers and Designers the freedom to produce radical new designs that will help you wring the most performance out of your boat.

MaxSpeed™ Dyno Balance Processes

Gives your boat a smoother running ride, higher top end speed, and increases fuel economy. This process is standard on every prop and is only offered as a costly option from other manufacturers. (Exclusive on all Mach3 and Mach4 Propellers)

Best "In-Class" Reversibility

Recent tests reveal that new Express Mach Series Propellers have up to 46% more reverse thrust over competitive propeller designs.

Tuned Vents for Fast Hole Shot

Turning Point uses this race boat proven technology to increase low speed acceleration and hole shot. Use it to get your boat on plane faster, and to your favorite fishing spot quicker! (selected models only 13" through 16" diameter 15+ Pitch).

Performance Tuned Rake Angles

Higher rake angles tighten the vortex produced by the propellers, adding to boat lift and overall performance.

High Flow-Through Barrel Exhaust System

Maximizing exhaust flow increases horsepower and top end speed.

Tuned Progressive Pitch Angles

Accelerating and channeling water to minimize slip increases performance and fuel economy.

The New Express® Mach3™ OS™ Series of Stainless Steel Propellers are the next step in the evolution of our very popular larger diameter VO series. Our Engineers and Propeller Experts made improvements to the cup, leading and trailing edges, and the aggressive progressive rake and blade geometry that are Turning Point hallmarks.

These modifications have produced a propeller with excellent hole shot, impressive bow lift, and class leading cornering. The Express Mach3 OS is perfectly matched to large horsepower bay boats, offshore center consoles, and high horsepower pontoons/tri-toons. It will fit all 90HP and larger 4.75" gearcase outboards from all engine manufacturers, and Mercury® Alpha One™ and Bravo One™, and Volvo® Penta® SX sterndrives. Large diameter three blade propellers offer great mid-range fuel economy in many applications. Whether you are looking to maximize your time on the water, extend your cruise range, or just stretch your fuel dollars, the Express Mach3 OS is a great choice to get the most out of your boat.

Utilizing almost 40 years of race boat and high performance prop design expertise, our Express® Mach3™ series of props captures all the best techniques and technologies available to get the most out of your boat. Aggressive pitch angles, radical designs, sharp cup profiles. These three blade propellers excel at achieving maximum speed, while delivering Best-in-Class handling and acceleration. Hole Shot? Got it, and hang on! Cornering? We've got that, too! Top Speed? We say "No Faster Prop on the Water" for a reason!

Upgrading your current propeller from aluminum to stainless steel, or from an old generation design to the latest technology, Express Mach3 Propeller is the best investment in boat improvement you can make. Today's New Designs will run circles around the competition, and can make dramatic improvements in boat performance. The gain in fuel economy can often pay for the cost of a new propeller in one or two seasons, making it a sound investment in your time on the water. Express Mach3 props are available for 9.9 (Bigfoot)to 300+HP outboards and sterndrives.

The Prop that put the "four" in Performance! Turning Point's Four Blade Hustler revolutionized the aluminum propeller market when introduced over 6 years ago. No one had ever produced an aluminum propeller with two different blade shapes (we call it Dual Geometry)for 90-300+HP applications and a state-of-the-art Swept Cleaver design for 40-150HP applications. These props re-wrote the rules, proving that you can run a four blade that has unprecedented hole shot, handling, and rough water stability without the top-end speed loss you experience with other manufacturers' propellers.

Now manufactured in our Industry leading TP17 stainless, the Express Mach4 series is perfect for any application that demands enhanced acceleration, cornering, and load carrying capabilities. This prop series is ideally suited for watersports, sterndrive boats, tri-toons, bay boats, and any vessel that can use stern lift. It is our best upgrade of older stainless designs from the 70's, 80's, 90's, and '00's, and will outrun most newer props, including five blade ski props.

The New Express® Mach3™ OS™ Series of Stainless Steel Propellers are the next step in the evolution of our very popular larger diameter VO series. Our Engineers and Propeller Experts made improvements to the cup, leading and trailing edges, and the aggressive progressive rake and blade geometry that are Turning Point hallmarks. These modifications have produced a propeller with excellent hole shot, impressive bow lift, and class leading cornering. The Express Mach3 OS is perfectly matched to large horsepower bay boats, offshore center consoles, and high horsepower pontoons/tri-toons. It will fit all 90HP and larger 4.75" gearcase outboards from all engine manufacturers, and Mercury® Alpha One™ and Bravo One™, and Volvo® Penta® SX sterndrives. Large diameter three blade propellers offer great mid-range fuel economy in many applications. Whether you are looking to maximize your time on the water, extend your cruise range, or just stretch your fuel dollars, the Express Mach3 OS is a great choice to get the most out of your boat.

TURNING POINT PROPELLERS - AEGIS

The NEW Aegis™ Propeller System uses unique geometry to produce a propeller that will minimize the potential damage from a prop strike to marine mammals, turtles, and other sea life at low boat speeds. It will also reduce the occurrences of incidental contact injury by bathers and boaters when the boat is at idle or stopped. Turning Point Aegis™ stainless steel boat propellers are designed for 25-300+HP outboards and sterndrive applications.

TURNING POINT PROPELLERS - HUSTLER

Hustler Manufacturing Design & Performance Features

Stainless Steel Performance at Aluminum Prices

New unique blade geometry and manufacturing processes results in the highest performance aluminum propellers on the block. Hustler® propellers out performed most competitive stainless steel props in recent tests. Not only does top speed, handling and hole shot improve, but also mid-range performance, which will save you a ton in gas usage.

Long Lasting Ultracoat™ Powder Coated Finish

Exclusive to Turning Point, the Ultracoat powder coat rivals a fine automotive finish, and is more durable than paint. Utilizing a state-of-the-art five step process, Ultracoat gives the propeller a shiny, uniform appearance that enhances any boat's good looks.

Tuned Vents for Fast Hole Shot

Turning Point uses this race boat proven technology to increase low speed acceleration and hole shot. Use it to get your boat on plane faster, and to your favorite fishing spot quicker! (selected models only 13" & 14" diameter 15+ Pitch).

Best "In-Class" Reversibility

Recent tests reveal that new Hustler Aluminum Propellers have up to 46% more reverse thrust over competitive propeller designs.

Performance Tuned Rake Angles

Higher rake angles tighten the vortex produced by the propellers, adding to boat lift and overall performance.

High Flow-Through Barrel Exhaust System

Maximizing exhaust flow increases horsepower and top end speed.

Tuned Progressive Pitch Angles

Accelerating and channeling water to minimize slip increases performance and fuel economy.

Turning Point has built our reputation on a relentless focus on engineering the best performing aluminum propellers in the World. Utilizing state-of-the-art Squeeze Casting technology, we produce Hustler 3 Blade Propellers that run as fast as our competitors' Stainless Steel Props, and even sometimes faster! Super stiff metallurgy, unique blade geometry, aggressive pitch, rake, and cup all give you the best we can offer: Stainless Performance at Aluminum Prices! Hustler propellers are the only aluminum propeller manufactured with performance enhancing vent holes (selected models only 13" & 14" diameter 15+ Pitch). If you want the most your boat and engine combination can offer, then the Hustler 3 Blade delivers.

The Three Blade Hustler is great for boaters looking to get the most top end out of their boat, and offer excellent bow lifting capabilities. Four blade props accelerate faster, exhibit stern lift, handle rough or following seas better, and maintain speed better as you load the boat down with gear or people. Three blade props run better on pontoons, while four blades and three blades both run well on tri-toons (recent testing has shown that pontoons and tri-toons run better with larger blade diameters than runabout or bass boat hulls).

The Prop that put the "four" in Perfourmance! Turning Point's Four Blade Hustler revolutionized the aluminum propeller market when introduced over 6 years ago. No one had ever produced an aluminum propeller with two different blade shapes (we call it Dual Geometry)for 90-300+HP applications and a state-of-the-art Swept Cleaver design for 40-150HP applications. These props re-wrote the rules, proving that you can run a four blade that has unprecedented hole shot, handling, and rough water stability without the top-end speed loss you experience with other manufacturers' propellers.

The Huslter 4 blade series is perfect for any application that demands enhanced acceleration, cornering, and load carrying capabilities. This prop series is ideally suited for watersports, sterndrive boats, tri-toons, bay boats, and any vessel that can use stern lift. It is our best upgrade of older aluminum designs from the 70's, 80's, 90's, and '00's, and will outrun most newer props, including five blade ski props

Squeeze Cast for Added Strength

Stainless steel performance is built into the Hustler Aluminum prop line. This is achieved through unique blade geometry and an exclusive Turning Point manufacturing process, Squeeze Casting. It generates the highest mechanical properties attainable in a cast aluminum prop resulting from a tighter grain structure. Stiffer blades means less flex and a faster prop. Competitors still use old Die-Cast processes that produce blades that flex, resulting in overall poor performance.

The Alloy:
SecureCore™ anodes are made from aluminum alloy, which is more active, longer lasting than zinc. It is also suitable for use in all types of water, including freshwater.

Construction:
The steel core holds the anode material secure until consumed, preventing the loss of loose pieces which can cause blockage and damage.

ZERO TORQUE ROTARY SYSTEM (ZTS)

The Zero Torque Rotary System (ZTS)

is designed to withstand the external forces such as sudden current change, propeller's torque and waves while driving the boat. ZTS eliminates torque coming from the steering cable with a uniquely patented design of the torque clutch.

Application Guide

Mechanical rotary steering non-power assisted outboard engine up to V-4.

Standard 3/4" tapered shaft. Approximately 3.8 turning revolution from lock to lock.

Maximum wheel size : 16" (406.4 mm) diameter.

Minimum steering cable bend radius : 8" (203.2 mm).

Should not be used on boats equipped with engines that exceed the maximum horse power rating of the boat.

Bolt-in replacement for our standard 3000 Rotary Steering System.

Replace/Upgrade the following competitors' helms:

Teleflex®: Safe-T® QC, Safe-T®, NFB™ 4.2 NFB™, Safe-T™ II
Uflex® : T71FC, T73NR FC

Features & Specification

Patented ZTS (Zero Torque Steering) System.

ZTS system substantially minimizes torque from engine.

Optional stainless steel steering cable construction: output ends and inner core.

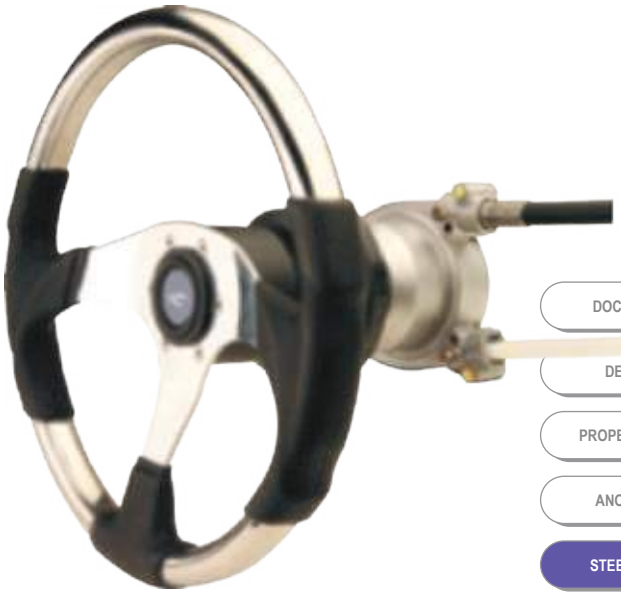

Snap-on bezel with minimum tools required.

Compact size and easy installation.

Bolt-in replacement (upgrade) for our standard 3000 Gen II Rotary Steering System.

Can generally be used on boats up to 25ft. in length.

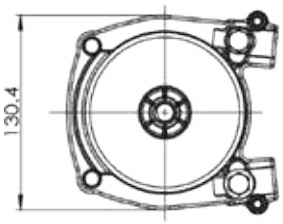

Manufactured to meet or exceed A.B.Y.C., N.M.M.A., I.M.C.I. (CE) certification requirements.

VALVTECT ITEMS

Ethanol Gas Treatment
Verified by engine manufacturer and ASTM tests, the new ValvTect Ethanol Gasoline Treatment is proven to stabilize gasoline, prevent corrosion, control moisture to help prevent phase separation, reduce octane loss and clean-up carbon deposits.
ValvTect Ethanol Gasoline Treatment is test proven to stabilize fuel for up to one year. As established under ASTM test procedures, it improved fuel stability 130% better than enzyme fuel treatments. In the ASTM Water Interface test, ValvTect's additive was 50% more effective than enzyme-based additives, thereby better reducing the chance of phase separation. Additionally, ValvTect was substantially more effective at preventing rust and corrosion.

Stor & Go® Ethanol Fuel Treatment & Stabilizer
4-in-1 Formula

The ULTIMATE Protection & Performance

•Maximum Corrosion Protection
•Stabilize Fuel in Storage & in Use
•Cleans Entire Fuel System
•Restores Power & MPG

Ethanol-blended fuel can lead to excess water in the fuel system; water in the fuel system can lead to severe corrosion, engine damage and unanticipated shut-down.

Ethanol is naturally attracted to water and prone to separating from the gas and blending with any water molecules in the fuel system. This harmful "phase separation" of the fuel can lead to severe corrosion, decreased fuel economy and engine performance, rough starts and hesitation.

In addition, the cleaning properties of ethanol can loosen varnish and corrosion deposits which then travel through the fuel system.

STOR & GO helps prevent phase separation with the 4-in-1 formula that protects all gas-powered 2- and 4-cycle engines against corrosion, cleans the entire fuel system, stabilizes fuel for long-term storage and restores power and mileage potential.

Laboratory testing proves STOR & GO provides better water removal capability (per modified ASTM D 1401) and better corrosion protection (per ASTM D 665) than other leading ethanol fuel treatments.

1 oz treats 10 gallons for everyday protection. 1 oz treats 5 gallons for storage. Stabilizes fuel for 24+ months.

CRC & MARY-KATE CORROSION

Salt Terminator® Engine Flush, Cleaner & Corrosion Inhibitor

Saltwater, salt air and road salt can lead to rust, corrosion, vehicle damage and costly repairs. Salt Terminator dissolves destructive salt debris that can't be removed by water alone and leaves a protective coating, guarding against future corrosion. Regular maintenance with Salt Terminator can help
extend the life of vehicles, trailers, tools, gear and equipment.
Lab-tests show Salt Terminator excels at removing heavy salt deposits without leaving behind a spotty residue like other similar products.
Spray on Salt Terminator to clean and protect virtually any surface. Or, use the mixer unit with any of the concentrate formulas. It automatically dilutes the concentrate and siphons it through a standard garden hose. No scrubbing or rinsing required. Biodegradable

Zinc Primers

For aluminum surfaces above or below the waterline use our Zinc Chromate. This powerful primer etches into the aluminum, forming a strong surface/primer union that is resistant to corrosion. For professional use only.
For steel and iron surfaces, especially welded joints, above or below the water line, use our Zinc Cold Galvanizing or Zinc Phosphate. This corrosive barrier contains a high percentage (95%) of zinc, for maximum resistance against solvents & abrasions.

GIMBAL HOUSING REPAIR KITS

Revolutionary new approach to repair the existing housing without removing the engine. Before this the only way to fix the actual housing was to replace everything, a cost which could easily reach $4,000.00. Simple: A special ring is adhered with a space-age epoxy that cures in 24 hours. Save money and time. Be back in the water the next day! Each kit comes with detailed instructions. Kits are compatible with MerCruiser Alpha, Alpha Gen II and Bravo. Tools needed: Die Grinder, Approved Wire Wheel, Acetone, 1/2" Dia. Drift, Screwdriver and a GHR Kit.

ELECTRICAL TESTING EQUIPMENT

SPARK TESTING EQUIPMENT

Open Spark Testers

Handy tester for hot DC sparks. Presence of spark is a logical first test in ignition troubleshooting. Intensity is next, determined by adjusting the gap. The cutout behind this gap prevents carbon tracking, which will cause a weak spark to look good on other testers. All four points adjust by sliding the spark plate which is calibrated for 1/4, 3/8, 7/16 and 1/2 inch gaps. Plug in connectors for positive contact with spark plug wires plus protection from accidental grounding.

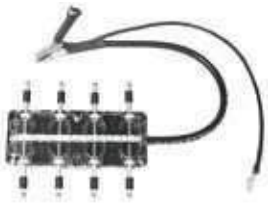

Part No. 996-100
(4 wire)

Part No. 996-101-01
Leads for 996-101

Part No. 996-102

SWITCHES/ADAPTERS

Smarttach Plus
Part No. 996-160
A wireless tachometer and spark analyzer. To read RPM simply hold unit near engine. The Smart Tach works by sensing radio transmissions from the engine's ignition system and analyzing these signals with a powerful microprocessor to display the RPM digitally on its liquid crystal display screen. To check the voltage in each spark plug wire simply hook each spark wire in turn using the sensor hook on the end of the antenna. Read the kilovolts on the display. No wire - no clips - no connections. A real time saver.

Quick Disconnect Hose for 995-100
Part No. 995-105

Gearcase Vacuum Tester
Part No. 995-102

Gearcase Pressure Tester
Part No. 995-103
If leakage is suspected due to loss of lubricant, merely pressurize the unit and inspect for signs of seepage. If none is apparent, inspection of shift rod and driveshaft areas is called for. Following repairs, the gearcase can be checked before filling by pressurizing and submerging in test tank. SEE 995-100 FOR VARIOUS ADAPTERS.
